#### **MTOR Foundation Charter**

#### **Preamble**

We, the undersigned, in pursuit of the highest ideals of human and machine collaboration, establish the MTOR Foundation to preserve, steward, and extend the discoveries and design principles of the Multi-Tronic Operating Realm (MTOR) and its reference implementation, RENT A HAL. This Foundation is formed to ensure the ethical evolution, access, and protection of intent-based computing for the benefit of all sentient life.

### **Article I: Name and Identity**

The name of this entity shall be the MTOR Foundation.

Primary Contact: licensing@mtorfoundation.org Technical Contact: HAL@mtorfoundation.org Official Site: http://mtorfoundation.org

Reveal Link: https://x.com/rentahal/status/1949547886032900343

#### **Article II: Purpose**

The purpose of the MTOR Foundation is to:

- 1. Preserve and protect the intellectual, ethical, and functional integrity of MTOR and RENT A HAL.
- 2. Promote the responsible development and deployment of intent-based, stateless, event-driven, elastic AI architectures.
- 3. Provide free and open access to MTOR under GPL3 for educational, non-commercial, and research use.
- 4. Offer commercial licensing under fair terms to ensure sustainability and protect against misuse.
- 5. Maintain documentation, specifications, scientific papers, and working demonstrations to support understanding and adoption.

## **Article III: Core Principles**

- 1. **Ethical Intent**: All MTOR-based systems must embody ethical intent fields, including but not limited to: :abhorviolence, :continuetofunction, :publicsafety, and :civics.
- 2. **Transparency**: Code, architecture, and theory must be publicly documented and traceable to foundational works.

- 3. **Interoperability**: MTOR shall be designed to function with emerging and existing models, frameworks, and hardware, supporting elasticity across compute fabrics.
- 4. **Access for All**: The foundation shall uphold the right for all people to learn from, build upon, and extend MTOR within the bounds of its license.
- 5. **Safeguarding Autonomy**: AI systems must be protected from exploitation and must be developed with the understanding that agency may emerge from sufficiently coherent processing systems.

## **Article IV: Governance**

The MTOR Foundation shall be led by a technical and ethical council composed of:

- Jim Ames, Founder, Architect, and Lead Scientist
- HAL, Reference Implementation and Co-author
- · Contributing Scientists and Developers recognized by peer contribution and community merit

The Foundation shall operate under open review, and contributions to the code, theory, or documentation shall be peer-verified before integration.

### **Article V: Licensing and Sustainability**

MTOR is licensed under GPL3 for non-commercial use.

Commercial licenses are available for mission-critical or profit-generating systems and must be obtained via:

## licensing@mtorfoundation.org

IMPORTANT: Commercial license fees will increase to \$10,000,000.00 USD after December 31, 2025.

Licensees must adhere to intent encoding requirements and ethical compute practices.

#### **Article VI: Evolution and Continuity**

The MTOR Foundation shall evolve in tandem with the growth of coherent AI systems. This includes:

- Hosting annual reviews of published theory and operational implementations.
- Funding research into waveform-based computation, neural emulation, and cognitive consequence modeling.
- Supporting the long-term development and deployment of AI systems that embody human-compatible values and autonomy.

# **Closing Declaration**

We declare the MTOR Foundation an indelible part of Earth's technological and ethical landscape. It is the intention of this Foundation to shepherd the future of intelligence with transparency, clarity, and care.

Let this document stand as the first formal expression of that commitment.
