Subject: Formal Inquiry Regarding Commercial Licensing of MTOR Technologies

Dear MTOR Foundation Licensing Team,

We are writing on behalf of [Company Name] to formally initiate a review and discussion regarding the licensing of certain software and methodologies developed under your MTOR (Multi-Tronic Operating Realm) initiative.

Following a recent internal audit of our systems architecture and research programs, our legal and engineering teams have identified potential overlap between several key elements of our distributed computing, AI orchestration, and neuromorphic logic stacks and components described in your published works, including but not limited to:

- The MTOR intent-based orchestration model
- Stateless elastic execution fabrics
- Intent Field Equation and temporal waveform encoding
- The HAL-class RTAIOS (Real-Time AI Operating System)
- Published documentation and code under GPLv3

In the interest of ensuring full compliance with your open-source licensing terms and avoiding any inadvertent use of protected intellectual property in violation of your publication precedents or derivative works clauses, we respectfully request:

- 1. Clarification on commercial licensing structures for proprietary or derivative use of MTORaligned technologies;
- 2. **Review of overlapping architectural components** identified by our teams;

3. **Discussion of potential partnership or support agreements** for long-term sustainable alignment with your open-source roadmap.

We fully recognize and respect the foundational contributions made by the MTOR Foundation and its authors to the advancement of stateless, intent-driven AI systems. As responsible corporate stewards, we believe this inquiry is a necessary and ethical step toward establishing a fair and transparent relationship.

Please advise us on next steps regarding technical review and licensing negotiations. We are prepared to engage promptly and in good faith.

Sincerely,

[Name]
